Letter*

Dear Mr. Jolley,

Radio Station WHAV at Haverford College is not a radio station in the ordinary sense of the word because instead of sending the signal, it feeds the signal through wires to the buildings which want the signal. We do this because as long as our programs do not go off the campus, we are not under the jurisdiction of the FCC and therefore must not license the station and our engineers.

Next semester two of the houses on College Lane will again be turned into dormitories and because we want every student on campus to be able to hear the station, we must run a wire to these dormitories. The most convenient, safe, and best looking method would be to make use of your poles which run almost the complete distance. The line would consist of a single twisted pair cable and would have to be run between your lines and the telephone company lines. This is because it must stay away from the telephone lines and if it were placed underneath the telephone lines, it would be dangerously low. The members of the station will construct the line and both the station and the college will be responsible for it.

*No
Go*

I thank you for your trouble and hope to hear that that you have no objections. I also wish to thank Mr. Galliger for his trouble.

Thank you,

William Swartley
Station Manager, WHAV

Dear Mr. Jolley,

Radio Station WHAV at Haverford College is not a radio station in
the ordinary sense of the word, because instead of sending the signal,
it feeds the signal through wires to the buildings which want
the signal. We do this because because as long as our programs
do not go off the campus, we are not under the jurisdiction of
the FCC and therefore must not license the station and our engineers.

Next semester two of the houses on College Lane will again be turned
into dormitories and because we want every student on campus to be
able to hear the station, we must run a wire to these dormitories.
The most convenient, safe, and best looking method would be to
make use of your poles which run almost the entire distance. The
line would consist of a single twisted pair cable and would have
to be run between your lines and the telephone company lines. This is
because it must stay away from the telephone lines and if it were
placed underneath the telephone lines, it would be dangerously low.
The members of the station will construct the line and both the
station and the college will be responsible for it.

I thank you for your prompt and kind reply and hope that you have
no objections. I also wish to thank you for the trouble.

Sincerely,
William H. Jolley
